DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Porter (US 5713912). Porter teaches a hemostatic tissue clamp (10) for clamping a target tissue site, said tissue clamp comprising: a first jaw member (12) and a second jaw member (12), said first and second jaw members being movable between an open configuration (fig. 1) and a clamping configuration (fig. 7), wherein when said first and second jaw members are in said open configuration said first and second jaw members are in a substantially spaced relationship relative to each other for allowing insertion of at least a portion of said target tissue (50) site therebetween (fig. 5), and wherein when said jaw

members are in said clamping configuration said first and second jaw are in a substantially proximal relationship relative to each other for exerting a hemostatic pressure on said portion of said target tissue site (fig. 7); said first and second jaw members together defining a substantially endless tissue contacting surface for exerting a hemostatic pressure substantially encompassing said target tissue site when in said clamping configuration (fig. 7); a jaw actuating means (70) mechanically coupled to said first and second jaw members for actuating said first and second jaw members between said open and clamping configurations (figs. 12-13).
